

Joyce Noble, Georgia Teel, and Joe Bell study class-mounted rock formations.

Better and healthier living, preparation for a higher education, and the ability for keener thinking are but a few of the doors opened by the course of Science. Hughes students are given a wide selection of courses including zoology, biology, botany, physiology, general science, chemistry, and physics. To a student who accepts a challenge, the key is found in the laboratory. Working in the greenhouse, the botany classes get on-the-job training as they raise flowers for sale in the spring. A capable faculty and well-equipped departments provide the groundwork for future scientists. With science playing a major part in the world affairs, capable minds will find a vast array of doors waiting to be opened when they graduate.
