The world of today is a highly technical world; the world of tomorrow promises to be even more complicated. With each day mathematics becomes more essential to all of us. At Hughes a student may follow a four-year course in mathematics, from Algebra, through Plane Geometry and Math III, to Math IV. This year an accelerated course for outstanding students has been added to the curriculum. Also offered are courses in General Mathematics, Business Math and Consumers' Math, all recognizing the fact that a knowledge of figures and basic computations is a necessity in our civilization. Those of us who have reached the edge of the unknown understand that mathematics is the light that will roll back the cold darkness of the space into which we venture.
