

At Hughes a student has an opportunity to pursue the never ending and always exciting search for understanding of the universe in which we live. With a choice of science courses, in well-equipped classrooms, each student may increase his knowledge of his environment. Beginning with General Science, the search continues through Biology, Botany, Zoology, Physiology, Physics and Chemistry, keeping pace with the rapid developments in science during the past decade. Knowing that the future is tied to generations well-versed in the methods and discoveries of modern science, skilled teachers work to prepare us for a world of atomic energy, electronics, anti-biotics, and space travel, a world whose survival may depend on our knowledge.

. . . and Sciences
