With a fine staff of science teachers, Hughes High School has long been a leader among schools producing students who succeed in science. Complete with laboratories and full experimental equipment, the science department provides an eternity of knowledge to be picked up by the student. We also have the most modern science department, in the respect of the W.C.E.T. program introduced in our school. A wide choice of subjects in the field of science is available, General Science, Chemistry, Physics, Biology, Botony, Zoology, and Physiology. Throughout the year, speakers lecture on the various aspects of science to auditorium sessions. This inspires students on to new goals in the world of Sputnik.

SCIENCE EDUCATES US NOW TO BUILD FOR THE FUTURE
