

Lenore Hammons and Jerry Tepe explore the microscopic world of protozoa. Miss Newman analyzes their most recent discoveries.

Science Emphasized in Technical Era

Science is a dynamic force which is altering everyone's life. Recognizing this fact, Hughes science teachers urge every student to take as much science as possible.

In the seventh and eighth grades general science is compulsory, but in the senior high there is a wide range of

elective courses. Ninth graders taking general science obtain a wide background of all phases of science. Students interested in plants and animals take biology, botany, zoology, and human physiology. College-bound students take physics and chemistry in the eleventh and twelfth grades.
