

All three brothers received their teaching degrees from the University of Dayton, in their respective fields. Brother John McGowan who taught the seniors Physics will leave this summer to teach at the University of Puerto Rico. Brother Bill, the Biology instructor, used visual aids and biological experiments with much success in his classes. Brother Howard taught the juniors, perhaps, the most dreaded of all high school subjects, chemistry. This summer Brother Howard is taking Quantitative Organic Chemistry at UD. The Science Department continues to make advances in teaching methods and presentation of material.
