

# Physics Club

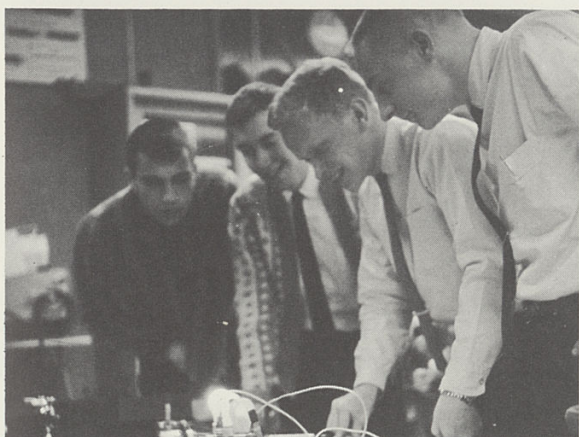

Mr. Kasselmann, club moderator instructs Louis DeFalaize, club president, in final assembly of the Doomsday Machine set to automatically annihilate students in case of insurrection.

"You've got to be kidding, no two transistor radio is going to get Moscow."

Another of the academic clubs founded this year is the physics club. Founded by Mr. Kasselmann, its purpose is to raise interest in the subject and to assist him in various ways in teaching. The club built and assembled various transistorized projects several weeks before the general physics class was scheduled to do so. With this knowledge under their belts they ably assisted the rest of the class.

Members of the club were drawn from Senior A and B Physics classes. Louis DeFalaize was president and Dave Sweet Secretary-Treasurer. These officers were more for organizational purposes as the members pursued their own research projects.

"And there we see the first intelligent communication from a sub-atomic particle. It says: Progress is our most important product. (This has been a paid political announcement.)"
