

Physics Club

The furtherment of interest and knowledge in physics was this year's physics club's main purpose. Under the guidance of Mr. Kasselmann the club accomplished a great deal. During meetings members experimented with such things as black light, ultrasonic sound and various phases of electronics. Members also paved the way for future members by starting construction on a large reflector telescope and by doing preliminary work and research on lasers.

L. to r.: John Themes, Paul Lahner, Iraneus Barczak, James Emark, David Suetholz, John Ramsey, Robert Brady, James Schoettker, Steve Fried, Eric Hilgefard, Walter Molony, John Feldman, Moderator Mr. Kasselmann.

Biology Club

L. to r.: William Jordan, J. Dorger, Charles Scheper, J. Dickman, Stephen Heidrich.

Under the guidance of Brother Gene Loewer, S.M., the Biology Club took huge strides in its attempt to become a very active organization. Field trips were planned and a few new animals were added to the facilities of the school. The boys built the cages for the lizards and the like themselves. Indeed the Biology Club is starting its rise to the top of the most popular clubs.
