

Joe Bellamy and John Baldwin demonstrate the physics of an experiment as interested Science Clubbers look on.

President Joe Bellamy
 Vice President..... John Baldwin
 Treasurer Wally Simmons
 Secretary Allan Taber

Science Club

The purpose of Science Club is to encourage future scientific minds and to provide them with a means of outlet. These ends are accomplished through extra time in the laboratory under the able guidance of Mr. Mahan and through lectures and movies at meetings. Of course the most educational item through the entire year is the annual Science Club trip. This year the young wizards visited Oak Ridge, Tennessee, where they encountered atoms galore. Oak Ridge is the home of one of the largest government atomic plants in existence.

Science is being stressed throughout the world as a result of the recent satellite and rocket progress. This trend has had its effect on our own club. This year, action was stressed and social activity became a lesser motive for attending. One must realize that no honor lies in having abilities, but in using them. Several requirements that limit membership were initiated this year. A member must have taken a Science course in school or must have produced sufficient evidence of a worthwhile scientific hobby. Science Club is not a club for deadbeats. Scientists are doers.
