

GEOLOGY CLUB

FIRST ROW: R. Forrester, D. Greiwe, G. Greiwe, D. Day, D. Fuhrman, J. Asbrock. SECOND ROW: J. Wallace, D. Wesseler, B. Pannkuk, H. Hall, T. Healey, G. Woebkenberg. THIRD ROW: H. Bresnahan, J. Ferguson, G. Mezack, R. Stacey, A. Roeder, N. Banks.

Founded in 1967, the purpose of the Geology Club is to give Earth Science students the opportunity to see geological formations in the immediate area. Bro Bernard Hartman moderated the 1968-69 chapter with Gary Woebkenberg as student.

The first part of the year was spent at John Bryant Park, Ky. , Big Bone, Ky. , and Natural Bridge, Ky. Our purpose was to collect fossil specimens in the Kentucky area and to categorize fossils to show the past history of the state.

An investigation was made of the geological formations in Ohio and Indiana to study formations and collect first hand specimens. The investigation included trips to southern Indiana to study the formation of geodes and natural caves, to several gravel pits, the Mill Creek River, the Little Miami River and the Old Man's Cave area.

"Geology Club searches for a bush."
