Technology at its Best

This year marked the opening of the computer lab. It was open every bell to students as well as teachers. Anyone was able to come in and work on school assignments, played educational computer games, type letters or just familiarize themselves with computers and the software in general.

"It's a good learning experience. There are a lot of people that are intimidated by computers and this is a chance for those individuals to get over their fear," said sophomore Debbie Silverman.

The lab was run by Kim Jarvis, computer lab specialist. She has been in charge for almost two years making sure that everything was in running condition and aiding those of us who were baffled to no end from time to time. Many of us would have been quite lost if it

wasn't for her patience and assistance.

Thanks to Kroger's and Thrifway's campaign, "Apples for Students", there had been a total collection of \$928,055 worth of receipts. Students brought in these receipts and the parent teacher organization S.H.A.P.E was responsible for the tabulating of them and the ordering of the computers. This money was put to good use to buy two IBM computers, one Apple IIGS System, three Imagewriter printers, and various software.

"The hardware has come in handy. It's good that we have more to offer our students," commented Jarvis.

Students as well as teachers could be seen pounding away at their keyboards or staring into space with disbelief. But regardless of experience, the computer lab was open to every computer wiz and inept operator every bell of the day.

"There are a lot of people that are intimidated by computers and this is a chance for those individuals to get over them."

-Debbie Silverman

Next to the computers, Mrs. Jarvis is the most vital part of the MacIntosh lab. When computers go crazy or the printers flash with red she is there to fix the students' work and make it look its best.
