Teaching career: 40 years  
Sycamore career: 30 years

The best part of my job is getting to work with such talented students and colleagues. It is very gratifying to watch students enter my classroom each fall full of curiosity and anticipation and then to see them leave me in the spring having accomplished so much in chemistry. After I retire, since I live on a working farm, my future is already set for me. However, we may do some traveling in the United States. My advice to my students is to approach life's events for what they can learn about life, themselves and their surroundings and then to share their knowledge with others to help them grow.

# MRS. MARGARET STONE
