The chess team consists of many amazing players. They have their own stories. Chess was first invented in India in the 8th century. It was then later changed over times by the Arabs and Persians. It has two players that stand on both sides, as they compete. Many of the seniors who are playing the game are soon leaving, and the chess club season is soon to end. The name chess came from a mispronunciation by the British merchants. Chess has been played for more than 1,400 years. It is played in many different countries, and every other place plays it differently. There are about 318 billion different positions after a four-piece move. It is a very entertaining game, which about 70% of the adult population loves to play.
