"You're Young. You'll Bounce Back." -Mr. Gaffigan

What an accomplishment. Mr. Jim Smanik, Science teacher, (pictured above) and Ms. Jennette Horton, Special Education teacher, (pictured below) after a lot of hard work, received their National Board Certification. This is a very lofty goal, however once received it is a very prestigious teaching award.

Teachers making headlines. Teachers are no longer seen in the background of news, they are now taking over the headlines.

Amazing accomplishments, such as some of the ones shown, are ways our teachers are standing out. The faculty at our school, are a step above others, shown by their capabilities, accomplishments, and also their commitment to teaching each and every student.

After all the news on the commotion of the teacher contract, it is great to see that so many teachers, Board members and community members have put that aside. After a lot of hard work teachers receive great awards too.

Winning \$20,000 would be a great award for anyone, however, many of us wouldn't think of receiving that for a science experiment.

"The simulation places students in the role of medical epidemiologists as they try to discover the cause and remedy to an outbreak of mysterious illness that strikes

a small town," said Mr. Robert Seiple, about the experiment for which he has won an award.

Also, knowing that your students appreciate the hark work you do, is a great encouragement to continue the work you are currently doing.

"The award was a tremendous surprise. Very thoughtful of Dee [the student that nominated him] to share such kind words," said Mr. Randy Lothrop, after receiving his teacher award.
