

—with a background of Victor experience and General Electric Company's research facilities

THE Coolidge X-Ray Tube, which has revolutionized the art of radiography, was developed in the Research Laboratories of the General Electric Company. In collaboration with these same laboratories, the Victor "CDX" Dental X-Ray Unit was evolved, when Victor X-Ray Corporation's Engineering Department, with its background of experience in the design of X-Ray apparatus, worked with the physicists of these laboratories, to the end that the mechanical and electrical design of the X-Ray unit would answer the critical requirements of the Coolidge tube itself. Thus has emanated a perfectly balanced equipment.

Inasmuch as the "CDX" Dental X-Ray Unit is sponsored by the same research facilities as all other notable "G. E." developments, and the Victor X-Ray Corporation is the subsidiary that extends a tangible service to the dental and medical professions in their X-Ray and Electro-Medical requirements, what better safeguard could be offered on your investment in dental X-Ray equipment?
