

AERO CLUB

Few activities on the campus have encouraged and enjoyed a more active interest than that shown by members of the Aero Club. The club has been chiefly fortunate in the active interest taken by Major Bradley Jones. His wide traveled experience and skilful art of telling stories has served to make his hobby-hour tales a mecca for students.

The principal activity of the Aero Club as an organization, however, has been to provide Glider Flight Training for its members. Flight training in a Primary Training Type Glider has progressed from the simple Ground Training and Balancing Stages to Shock-Cord Launching and finally Auto-Towing. Over 700 hops have been made in the past year, clearly an indication of the interest shown by the members. Flying activities are carried on Saturdays and Sundays at Lunken Airport on a portion of the Airport reserved for the Club.

A Secondary Type Glider with improved flying characteristics, now in the last stages of completion will soon be available to the more advanced flyers. Soaring flights over suitable terrain is possible with this type of glider in addition to which more complicated maneuvering is available with auto-towing.

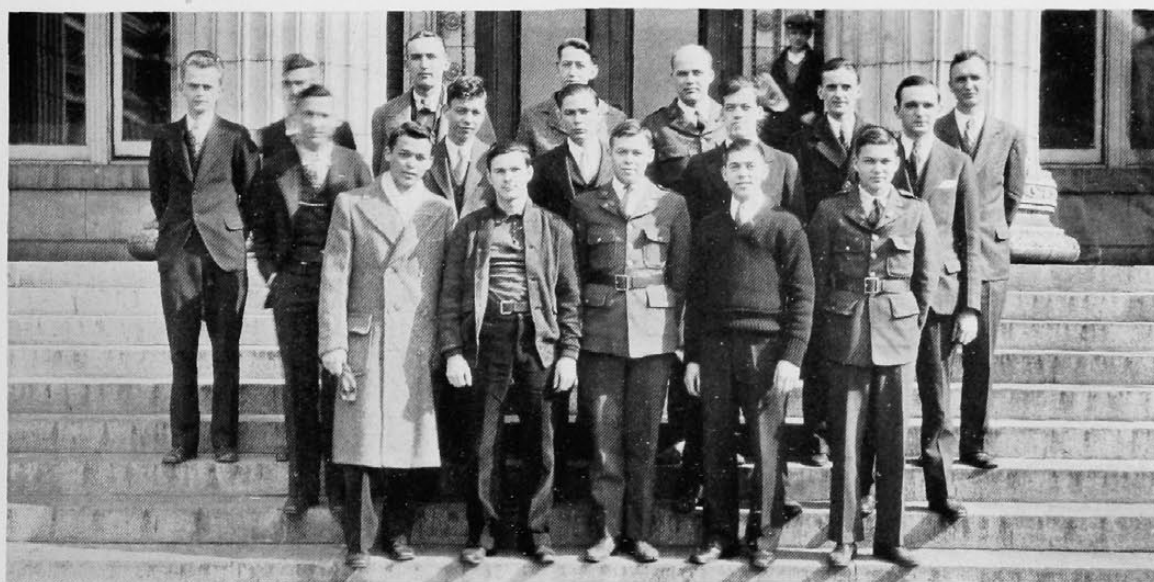

Interest in Aeronautics is steadily increasing and with the Aero Club as a nucleus we feel that it will soon become a major activity on the campus.

The club's pride and joy
